The screenshot shows a Python 3.7.0 Shell window with the output of a script. The script connects to the IBM Watson IoT platform and publishes sensor data (Moisture, Temperature, Humidity) to a device. It also receives commands to turn the motor on or off. The output shows the device successfully connecting and publishing data, followed by receiving the 'motoron' command and then the 'motoroff' command.

## Measured Data

**Moisture : 59**

**Temperature(c): 90**

**Humidity(%): 85**

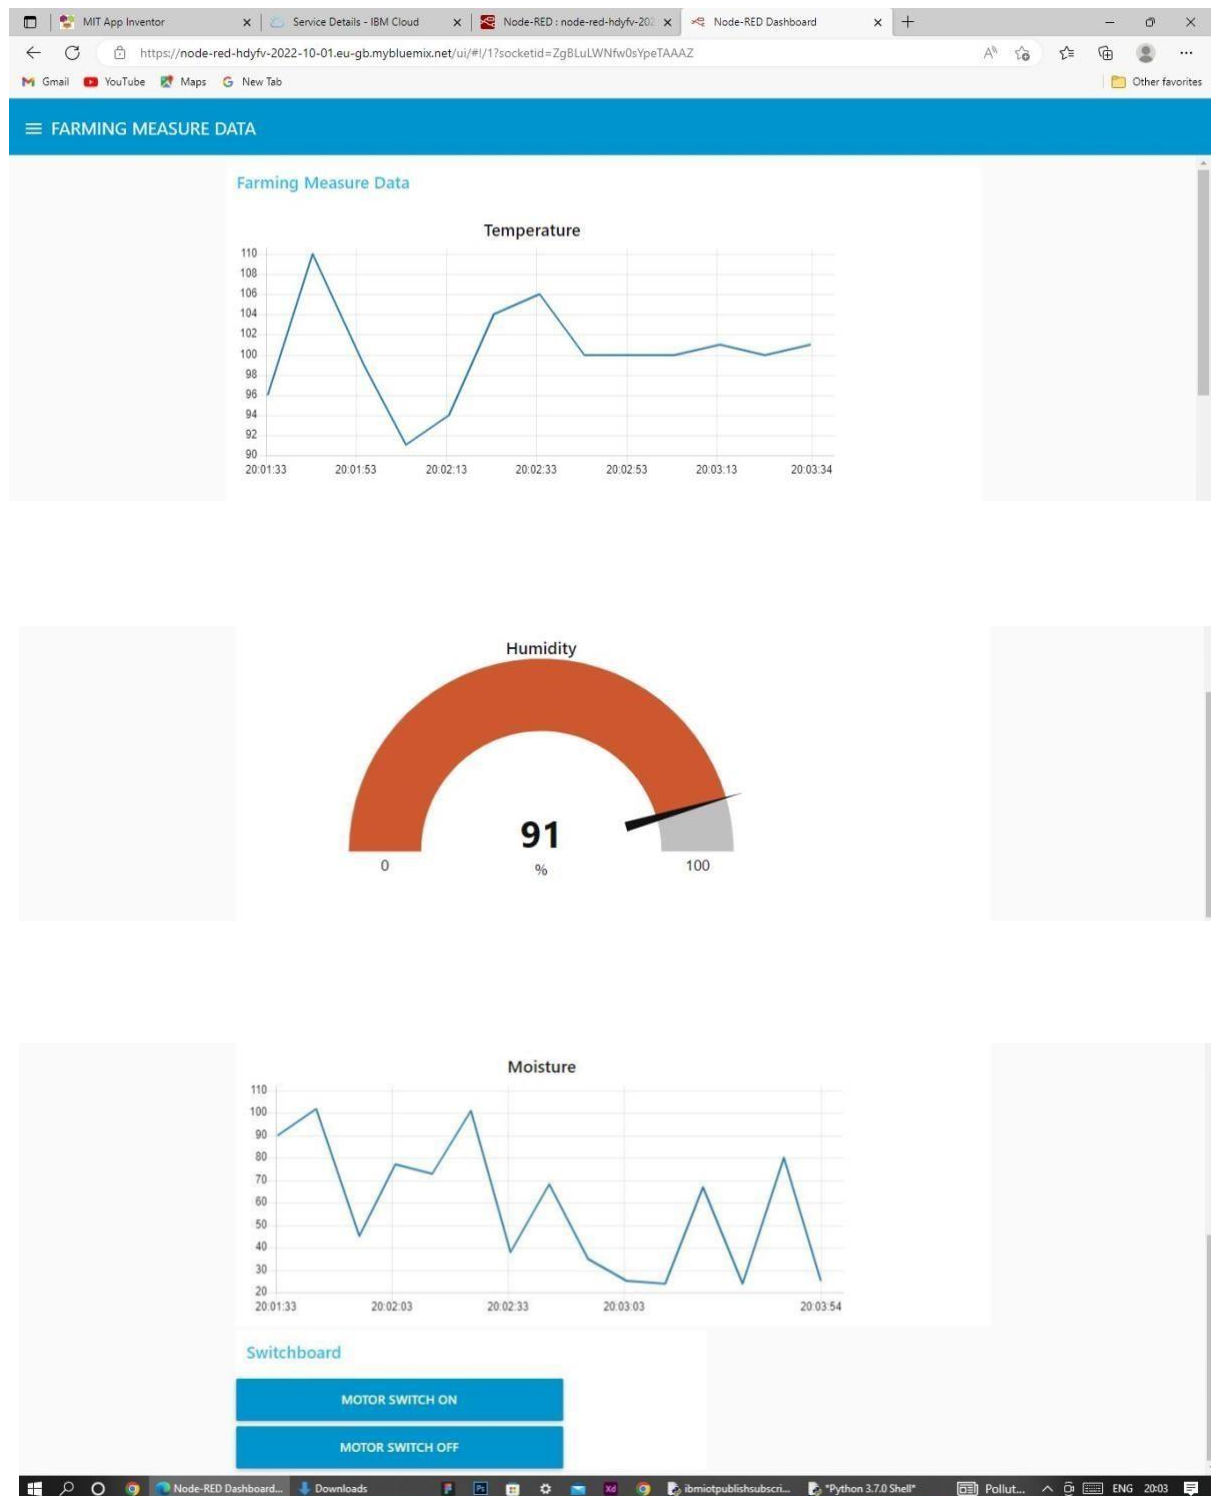

## Switchboard

**Motor on**

**Motor off**

## 8. Advantages & Disadvantages Advantages:

- Farms can be monitored and controlled remotely.
- Increase in convenience to farmers.
- Less labor cost.
- Better standards of living.

**Disadvantages:**

- Lack of internet/connectivity issues.
- Added cost of internet and internet gateway infrastructure.
- Farmers wanted to adapt the use of Mobile App.

**9. Conclusion**

Thus the objective of the project to implement an IoT system in order to help farmers to control and monitor their farms has been implemented successfully.
